

openMetaAnalysis: Risk of bias

Table. Risk of bias for individual trials* and across trials† based on the Cochrane Handbook with modifications for the assessment of individual studies due to lack of Consort diagram‡ and trial registration.

Study	Subjects and summary risk†	Selection bias		Performance bias	Detection bias	Attrition bias	Reporting bias	Other biases
		Random sequence generation	Allocation concealment	Blinding of participants and personnel	Blinding of outcome assessment	Incomplete outcome data	Selective reporting	E.g. imbalanced compliance, co-interventions, or other.

‡ Lack of a Consort diagram, by itself, is considered to be unclear risk for incomplete outcome and attrition bias.

§ Lack of trial registration, by itself, is considered to be unclear risk for selective reporting.

|| Method of randomization not clearly described.
